

IMPORTANT INFORMATION ON CORONAVIRUS

While there is no documented risk of COVID-19 (novel coronavirus) transmission through blood, in an abundance of safety, we are recommending a **voluntary self-deferral** for certain donors.

Please do not donate blood if in the past 28 days:

1. You have been outside of the contiguous 48 United States.
2. You have been diagnosed with COVID-19.
3. You have lived with, had close contact with, or provided care to an individual diagnosed with COVID-19, outside of a health care setting where infection control practices were employed.
